

NetSupport Protect

NetSupport Protect is the number one choice for technology coordinators and IT administrators to protect Windows® operating systems and desktops from unwanted or malicious changes.

NetSupport Protect provides a secure, reliable and productive computer environment ideal for shared use systems and the classroom. With its extensive list of security features and intuitive format, administrators can use NetSupport Protect to guarantee that users are getting the most beneficial use of their computer learning experience.

NetSupport Protect prevents users from deleting critical files and applications, making unauthorised changes to the desktop, saving unwanted programs and corrupting the operating system.

With NetSupport Protect, you can feel confident that unauthorised changes to a system, whether accidental or malicious, won't become an issue or impact on the productivity of your computer systems.

NetSupport Protect provides a proactive, rather than reactive solution to the challenges faced. The philosophy of the product is to prevent changes to the desktop environment and avoid the need to rely on "repair" based solutions that are more costly and have a greater maintenance overhead.

Using NetSupport Protect, IT staff can create a secure desktop environment where system configuration and access from external sources are protected, where users can use available applications but are shielded from system resources and the temptation of investigating the workings of the desktop.

Available fully localised in English, German, French, Spanish and Italian, NetSupport Protect is the perfect solution for protecting your technology investment.

FEATURES:

Protect Files & Folders

Prevent delete and rename

Hide Files and Folders

Restrict changes to the desktop

Protect the OS and system settings

Lock Control Panels and tools

Lock specified Applications

Control Network Access

Prevent file creation by type

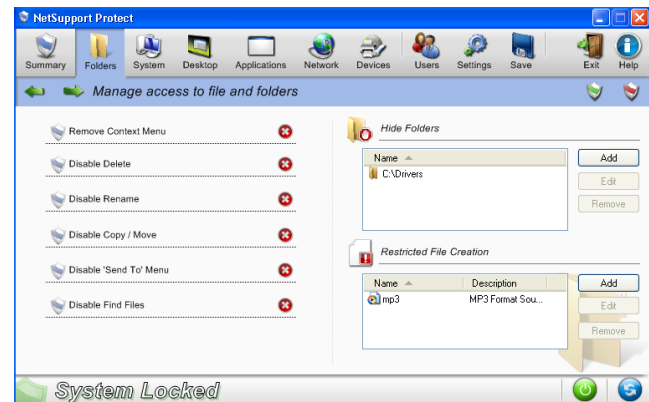

Control access to USB devices

Control access to CDRW / DVDs

Control Internet downloads

Clear and Concise security indicators are provided.

Preserve files on your systems and hide system content.

Prevent

Teachers need to manage students who are using computers in a lab or multi-desktop classroom to ensure that they are learning and spending time on their assigned tasks.

Children want to learn, and often the best way is to experiment. Lab computers may be used four or five times a day for different classes, so really can't afford to endure too much practical experimentation.

Protect

A corporate network is only as secure as the security provided. Why suffer the downtime of systems needing to be re-imaged or restored when NetSupport Protect avoids the problem arising.

Control what type of content is downloaded, allow users to copy work files from a memory stick or CDR but block potentially dangerous applications.

Preserve

Computers in a public workspace, Internet Café, Tradeshow or a call centre where multiple users have access to a single PC, all need additional security to protect the fabric of the OS.

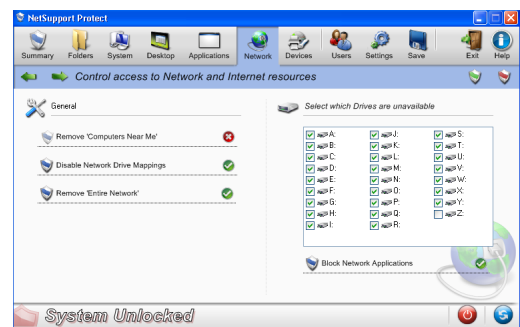

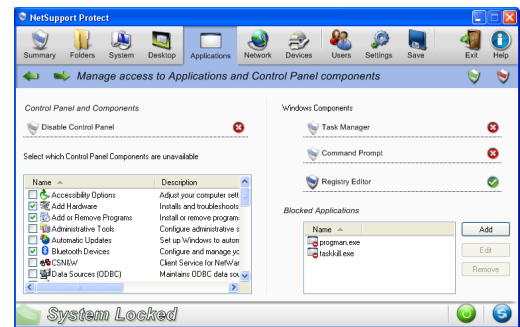

Laptops away from the office need to remain protected, to avoid new content being migrated back to the network each time the user returns to the office.

Key feature highlights in NetSupport Protect are:

- Prevent copying, deletion and renaming of files and folders.
- Hide folders and restrict creation of defined file types.
- Restrict changes to the desktop, taskbar and system settings.
- Restrict shutdown, logoff, lock and password changes.
- Protect the operating system and computer settings.
- Lock control panels, task manager, command prompt and registry.
- Restrict user-defined applications from running.
- Restrict available network drives, drive mappings and network neighbourhood.
- Prevent access to windows systems tools.
- Prevent web browsers from running.
- Restrict changes to the system printers.
- Control access to USB and CD/DVD drives.
- Disable USB devices, allow read only or prevent application launch.
- Prevent users from installing unauthorised software.
- Apply policies to all users, or exclude specified accounts.
- Share security configurations across a network.

From the makers of NetSupport School, the market leading classroom instruction and monitoring software. NetSupport technology is installed on over 5,000,000 systems worldwide.

Download a trial copy today and see just how easy it is to protect your computers.

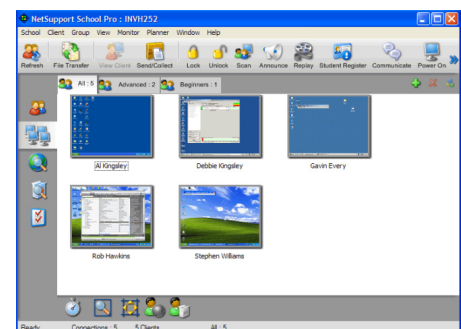

NetSupport School

NetSupport School is a class leading training software solution, providing teachers with the ability to interact with their students either individually, as a pre-defined group or to the overall class. Combining advanced multiple PC monitoring with an innovative customised test designer and the ability to create automated Lesson Plans, this latest version rises to the challenge and requirements of today's modern classroom.

Providing the very latest IT infrastructure is only half the equation. Ensuring it is used in the most effective way represents the other half. With NetSupport School, full application and internet control is offered as standard, allowing for individual or overall class restrictions to be applied whereby only approved websites are visited and appropriate applications are used. Combine this with the ability to blank the students screens and to simultaneously monitor all Student PCs either in thumbnail or full screen mode, complete Student attention and focus is encouraged at all times.

Recognising that Students work at different speeds, NetSupport School also embraces group work, enabling selected Students to be assigned as Group Leaders, where they temporarily act as the tutor within a group until such privileges are revoked. This is further complimented with the Group Chat function where a discussion box for selected Students is available, where comments can be posted together with the use of an interactive whiteboard for more effective demonstrations.

Available fully localised in English, German, French, Spanish, Italian, Brazilian, Portuguese, Japanese and Arabic, NetSupport School is the proven solution for Computer Based Training and commands the widest installation base of any product of its kind.

Control / Monitor Student PCs

Create Instant Student Surveys

Design and Send Custom Tests

Monitor / Restrict Application Usage

Monitor / Restrict Web Activity

Blank Student Screens

Show Your Screen To The Class
